

Machine Requirements

VOLTRA MOBILITY // TOOLING & MACHINE SPECIFICATIONS

Document ID: MACH-SPEC-404

Machine B: SMT Robot #4

- Station Location: Assembly Line 2 [ECU Sub-assembly]
- Function: High-speed placement of microchips onto vehicle avionics circuit boards.
- Critical Feed Component: Microcontroller MCU-900 [taped reel format].
- Operating Dependency: SMT Robot #4 cannot substitute alternative microchip architect

Battery Pack Laser Welder

- Station Location: Assembly Line 1 [Powertrain Integration]
- Function: Automated robotic busbar welding for Lithium-Ion Battery Cells.
- Cycle Time: 45 seconds per module.

Stator Winding Automated Press

- Station Location: Assembly Line 1 [Powertrain Integration]
- Function: Press-fits Electric Traction Motor Stator core into electric motor housin

Automated Test Rig #2

- Station Location: Line 3 Inspection Station
- Function: Calibration of Ultrasonic Radar Sensors for collision avoidance and ADAS.
